Subject: Amateur Radio Beginner  
To: ham-policy@ucsd.edu

Hi,

I just heard about Amateur Radio from a friend who is also beginning to  
learn about Amateur Radio. It sounds really interesting to me and I would  
like to learn more details about this. Are there any magazines and books  
for Amateur radio? Or any FTP sites where I could download files  
about Amateur Radio?

I am interested in learning those codes and if you know where I can  
register for the class, do let me know. I live in Columbus, Ohio.

Thanks very much! :)

Brenda

> You did! Who is running the code practice on 5870 KHz?  
>

CW training was conducted at the Radioman 'A' School. If you're hearing code practice on 5870khz, please provide me the callsign of the originating station and I'll be happy to investigate. Are you certain it's code practice, or merely an automated weather product, which we still provide? It's entered as a file from a remote computer.

NMC = CAMSPAC San Francisco  
NMO = Commsta Honolulu  
NOJ = Commsta Kodiak  
NMF = Commsta Boston (remotely keyed from NMN)  
NMN = CAMSLANT Chesapeake  
NMA = Commsta Miami (remotely keyed from NMN)  
NMG = Commsta New Orleans

>It is not, plain and simple. It can be used in time of war as such.

I think you need to go back and read what I wrote again. The USCG becomes part of DOD during a war. As such, they run by the same rules as any other part of DOD, and maintain a liason bureaucracy with DOD.

But if you're still into bandying semantics, and live within a few miles of a navigable seaway, I'll be more than happy to request that those "non-military"

high endurance cutters shell your house with those peaceful, "non-military"  
five inch guns...;-)

Oh [dumb look] yeah....that's right you sure did. <|D

You are very perceptive...

> : that I hope never even makes it to the table for discussion.

> Hey Jim, you're too late, it IS on the table and we ARE discussing it!

You got me there Paul. But...I think you know whose table I meant. Anyway, I think I will probably get more flames for my reply than you will for your idea. This is a very interesting topic and does beat the heck out of the code/no-code thing. Of course after putting on the straw that breaks the camel's back...we just love to pile on more straw. Kinda like killing a dead horse, don't ya think?

I hope you can tell I'm just having fun with all this with just a tint of seriousness dropped in. I'll keep reading the replies to your original though. As Mr. Spock would say, "Fascinating." Simply fascinating.

Well... I've gotten a ton of email and we've had some lively discussion here.

\*BUT\*

NOBODY has yet given one single objective reason why this proposal would not work, nor has anyone given an example of a likely method of abuse that was not covered by the HEAVY restrictions on the REMOTE operator, nor the fact that the LICENSED CONTROL OP was placing their license on the line anytime they did run a remote op.
